### Real Economic Growth Bounces Back

Saskatchewan's economy, as measured by the rate of increase in real Gross Domestic Product, expanded at an annual rate of 3.0 per cent in 2007, with real personal expenditure on goods and services accounting for almost all of the increase.

Real personal expenditure on goods and services increased by 6.4 per cent last year, the fastest rate of increase recorded since 1976. Real government current expenditure on goods and services and real gross fixed capital formation grew by 2.2 per cent and 1.5 per cent, respectively.

Real net trade was a drag on growth as the strong Canadian dollar and a strong domestic economy caused real imports to rise nearly three times faster than real exports.

Chart 1: Real GDP & Components  
Per cent Change

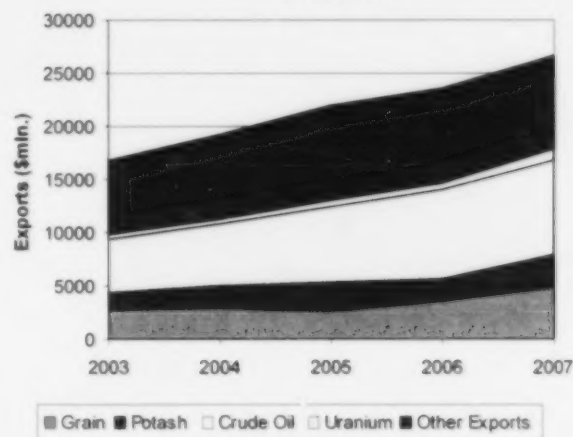

Real Personal Consumption	6.4
Real Government Consumption	2.2
Real Investment	1.5
Real Exports	1.6
Real Imports	4.3
Real Domestic Demand	4.3
Real GDP	3

### Commodity Boom Supported GDP and Corporate Profits

Favoured by the commodity boom, Saskatchewan's nominal GDP increased at an annual rate of 10.9 per cent in 2007. Strong market demand and the accompanying increase in commodity prices boosted the value of exports last year. Grain exports rose

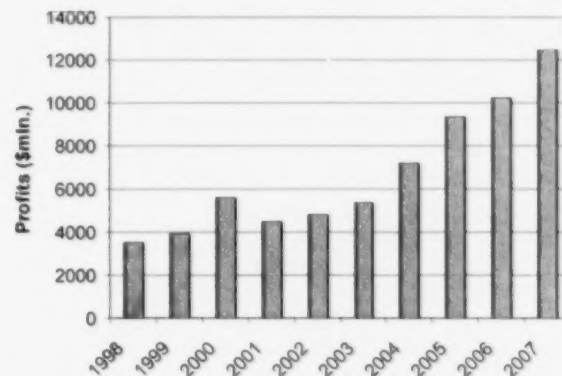

39.8 per cent while potash exports increased by 38.4 per cent. The value of crude oil exports also edged higher.

Chart 2: Commodity Exports  
from Saskatchewan  
2003-2007

Alongside these, total corporate profits before taxes advanced at an annual rate of 22.4 per cent, a solid pick-up from the more modest 9.4 per cent increase in profits in 2006. Corporate profits reached \$12.5 billion in 2007, nearly three times its level in 2001, the last time corporate profits plunged.

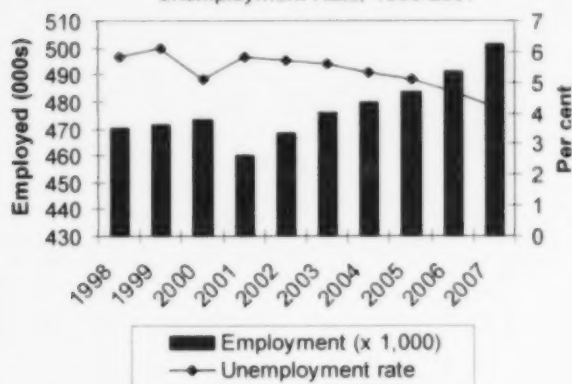

Chart 3: Corporate Profits  
Before Taxes 1998-2007  
Saskatchewan

## Job Creation Accelerates

The pace of job creation accelerated in 2007. Employment increased by 10,167 mostly in trade, construction, health care, education, the professional, scientific and technical services category, and manufacturing. Last year's employment roll reached 501,700, the highest in the history of the province. Saskatchewan's excellent labour market performance in the past year is exemplified further in the 26-year, record low unemployment rate of 4.2 per cent.

Chart 4: Employed & Unemployment Rate, 1998-2007

## Incomes Surge

The relatively tight labour market and rapid pace of job creation have no doubt combined to boost wages. Average weekly earnings increased by 4.6 per cent in 2007. As a result of the gains in wages and employment, labour income expanded by 7.8 per cent and total personal income went up by 9.6 per cent.

## Population Creeps Up

The population of Saskatchewan had grown for seven consecutive quarters as of the end of 2007. The provincial population as of January 1, 2008, was estimated to be 1,006,644. This is a 1.7 per cent increase from the January 1, 2007, population estimate of 990,152. Saskatchewan experienced the third highest rate of population growth in Canada in 2007. This is the first year-over-year population increase for this

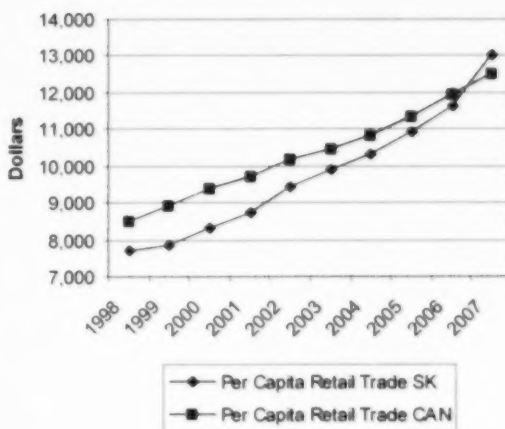

province since 1984.

29,634 individuals moved to Saskatchewan from other provinces in 2007 while 19,460 left to go elsewhere in Canada. Therefore, the net population growth caused by interprovincial migration was 10,174. Additionally, the end of 2007 brought five consecutive quarters of net migration from Alberta to Saskatchewan. In 2007 there were 17,179 Albertans came to Saskatchewan while only 10,229 people here relocated to Alberta.

## Consumers Lead the Way

Total consumer expenditure on all goods and services rose by 8.5 per cent in 2007 when expressed in current dollars. Consumer spending has been increasing across Canada in general, but 2007 was of particular importance for Saskatchewan. Per capita retail trade in this province now exceeds the national level. Canadian per capita retail trade in 2007 was \$12,495 while for Saskatchewan the equivalent value was \$13,025. In 1998, the per capita retail trade for Canada was \$8,505 and in Saskatchewan it was \$7,684.

Chart 5: Per Capita Retail Trade Saskatchewan and Canada 1998-2007

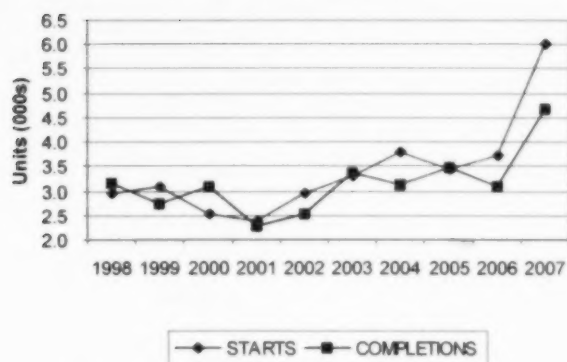

## Housing Soars

The level of building permits granted in Saskatchewan in 2007 was \$1.65 billion, a 44.6 per cent increase over 2006. The growth in residential construction was even more profound. 2007 residential building permits of \$865 million were 75.3 per cent ahead of the 2006 total.

Construction was started on 6,007 residential units in 2007, a 61.7 per cent increase from 2006. Canada as a whole experienced growth of 0.4 per cent here between 2006 and 2007. Construction was completed on 4,683 residential units in 2007 in this province, which was a growth of 51.8 per cent compared to the previous year. The number of completions Canada-wide dropped by 3.3 per cent between 2006 and 2007. 2,380 residential units began construction in the Saskatoon Census Metropolitan Area (CMA) in 2007, a 59.1 per cent growth from 2006. The similar number for the Regina CMA in 2007 was 1,398. This total was 41.8 higher than in 2006.

The following chart graphically demonstrates that the current high level of housing construction province-wide has exceeded the trend for last 10 years.

Chart 6: New Dwelling Units,  
Starts and Completions,  
Saskatchewan, 1998-2007

## Inflation Develops

During 2007 Saskatchewan had a 2.8 per cent increase in the Consumer Price Index (CPI) over 2006. While higher than the Canada-wide 2007 rate of 2.2 per cent, Saskatchewan's CPI here was still considerably lower than the nation-leading Alberta level of 5.0 per cent. However, the Saskatoon annual CPI increase in 2007 was 3.4 per cent and in Regina the equivalent was 2.6 per cent. Among Canadian cities only Calgary (5.1 per cent) and Edmonton (4.8 per cent) had higher CPI increases in 2007 than Saskatoon and Regina.

For 2007, the CPI indicated an annual increase of 30.6 per cent in Saskatchewan for the cost of new housing. The equivalent value for Canada was 5.9 per cent. The CPI does not track this commodity either for Regina or Saskatoon. However, it does present price changes for a broad group of shelter-related costs such as new housing construction, rent, utilities, etc. for both of these two urban areas. The annual shelter CPI increase for 2007 in Saskatoon was 14.8 per cent and for Regina the similar value was 7.1 per cent.

# Saskatchewan Economic Accounts

---

The Saskatchewan Bureau of Statistics has developed a set of economic accounts which can be used to trace the development and growth of the Saskatchewan economy.

The purpose of the accounts is to measure the value of economic activity in each sector of the economy. This is done by means of a balancing set of accounts similar to the annual income and expenditure statements of a commercial enterprise.

The accounts have many useful functions. They consolidate information which is now provided through a number of scattered sources and organize it into a central framework. This allows many kinds of economic analysis to be performed ranging from monitoring current economic performance to analysis of structural change in the economy.

The Saskatchewan Bureau of Statistics has adopted the Chain Fisher volume index methodology for calculating real Gross Domestic Product (GDP). This method of calculating real growth in the economy removes potential substitution bias that exists when using a constant-dollar method (the Laspeyres index).

The Saskatchewan Bureau of Statistics has available, upon request, many more detailed tables and other information concerning the Saskatchewan Economic Accounts.

## Saskatchewan Economic Accounts

In nominal terms, Saskatchewan's GDP increased by 10.9 per cent in 2007 to \$50,961 million while final domestic demand (sum of personal expenditures, government expenditures and investment) rose by 7.4 per cent. Personal expenditure on consumer goods and services rose by 8.5 per cent. Buoyed on by strong retail and new motor vehicle sales data, spending rose by 13.1 per cent on durable goods, 8.5 per cent on semi-durable goods and 7.8 per cent on non-durable goods. Services also posted strong growth (7.6 per cent) in 2007. Government current expenditure on goods and services rose by 5.6 per cent in 2007 while total investment increased by 6.4 per cent in 2007. Fueled on by strong wheat, potash and crude oil sales out of Saskatchewan, nominal exports increased 11.2 per cent from 2006 levels. Imports rose 7.3 per cent in 2006.

Real final domestic demand increased by 4.3 per cent in 2007. Real personal expenditure on consumer goods and services increased by 6.4 per cent, government expenditures on goods and services increased by 2.2 per cent and real gross fixed capital formation increased by 1.5 percent.

Real gross domestic product rebounded from a weak 2006 by increasing at an annual rate of 3.0 per cent in

2007 to \$40,340 million. The increase in the Canadian dollar, as well as strong domestic demand led real imports to rise by 4.3 percent over 2006. Increased grain prices led to further reductions in farm inventories while non-farm inventories rose substantially from 2006. Real exports rose 1.6 percent in 2007.

Personal income in Saskatchewan rose by 9.1 per cent in 2007. Wages, salaries and supplementary incomes (on a Gross National Product basis) rose 7.8 per cent and net income of non-farm unincorporated businesses increased by 5.5 per cent. Accrued (based on year of production) net income received by farm operators increased by over \$400 million from 2006. After subtracting direct taxes, contributions to social insurance plans, and pension plan contributions, personal disposable income rose by 9.1 per cent. However, strong levels of personal expenditures on goods and services ensured that personal savings remained negative in 2007 (-\$840 million).

This document represents preliminary Saskatchewan economic accounts for 2007 data. Periodic revisions are common to all economic series, as more comprehensive data is obtained, in order to improve the accuracy, reliability and consistency of the data.
